AMENDMENT TO CLAIMS

1. (previously presented) A plasmid comprising:

a primer sequence incorporated into the plasmid, the primer sequence being capable of

annealing to a first portion of nucleic acid encoding a polypeptide;

a collar sequence incorporated into the plasmid, the collar sequence being capable of

annealing to a second portion of the nucleic acid encoding a polypeptide, the second portion of

the nucleic acid encoding a polypeptide being separated by at least 20 nucleotides from the first

portion of the nucleic acid encoding a polypeptide; and

at least one restriction site located between the primer and collar sequences.

2. (original) A plasmid as in claim 1 wherein the primer and collar sequences are

capable of annealing to first strand cDNA encoding a polypeptide.

3. (original) A plasmid as in claim 1 wherein the primer and collar sequences are

capable of annealing to mRNA encoding a polypeptide.

4. (original) A plasmid as in claim 1 wherein the primer and collar sequences are

capable of annealing to mRNA encoding at least a portion of an antibody.

5. (previously presented) A plasmid as in claim 1 wherein the collar sequence is

capable of annealing to a portion of the nucleic acid encoding a polypeptide that is separated in

the 5' direction from the portion of the nucleic acid to which the primer sequence is capable of

annealing.

6. (original) A host cell transformed with a plasmid of claim 1.

Claims 7-22 (cancelled).

Appl. No. 10/006,591 Amdt. Dated September 23, 2004 Reply to Office Action of July 26, 2004 Page 3 of 9

23. (previously presented) A plasmid comprising:

a downstream primer sequence incorporated into the plasmid, the downstream primer being capable of annealing to a first portion of mRNA encoding at least a portion of an antibody;

an upstream collar sequence incorporated into the plasmid, the upstream collar sequence being capable of annealing to a second portion of the mRNA encoding at least a portion of an antibody; and

at least one restriction site located between the downstream primer sequence and upstream collar sequence incorporated into the plasmid.

- 24. (original) A plasmid as in claim 23 wherein the upstream collar sequence is capable of annealing to a portion of the mRNA encoding a framework region of an antibody.
- 25. (original) A plasmid as in claim 23 wherein the upstream collar sequence is capable of annealing to a leader sequence of the mRNA encoding an antibody.
- 26. (original) A plasmid as in claim 23 wherein the upstream collar sequence is capable of annealing to a portion of the mRNA encoding a framework region associated with a light chain of an antibody.
- 27. (original) A plasmid as in claim 23 wherein the upstream collar sequence is capable of annealing to a portion of the mRNA encoding a framework region associated with a heavy chain of an antibody.
- 28. (original) A plasmid as in claim 23 wherein the downstream primer is capable of annealing to a portion of the mRNA encoding a constant region of an antibody.

Appl. No. 10/006,591 Amdt. Dated September 23, 2004 Reply to Office Action of July 26, 2004

29. (original) A plasmid as in claim 23 wherein the downstream primer is capable of annealing to a portion of the mRNA encoding a constant region associated with a light chain of an antibody.

- 30. (original) A plasmid as in claim 23 wherein the downstream primer is capable of annealing to a portion of the mRNA encoding a framework two (FR2), framework three (FR3) or framework four (FR4) region associated with a light chain of an antibody.
- 31. (original) A plasmid as in claim 23 wherein the downstream primer is capable of annealing to a portion of the mRNA encoding a constant region associated with a heavy chain of an antibody.
- 32. (previously presented) A plasmid as in claim 23 wherein the downstream primer is capable of annealing to a portion of the mRNA encoding a framework two (FR2), framework three (FR3) or framework four (FR4) region associated with a heavy chain of an antibody.
 - 33. (currently amended) A plasmid as in claim 23 comprising:

a downstream primer sequence comprising wherein the downstream primer comprises SEQ. ID. NO: 4 incorporated into the plasmid, the downstream primer being capable of annealing to a first portion of mRNA encoding at least a portion of an antibody;

an upstream collar sequence incorporated into the plasmid, the upstream collar sequence being capable of annealing to a second portion of the mRNA encoding at least a portion of an antibody; and

at least one restriction site located between the downstream primer sequence and upstream collar sequence incorporated into the plasmid.

34. (currently amended) A plasmid as in claim 23 comprising:

Appl. No. 10/006,591 Amdt. Dated September 23, 2004 Reply to Office Action of July 26, 2004 Page 5 of 9

a downstream primer sequence comprising wherein the downstream primer comprises SEQ. ID. NO: 8 incorporated into the plasmid, the downstream primer being capable of annealing to a first portion of mRNA encoding at least a portion of an antibody;

an upstream collar sequence incorporated into the plasmid, the upstream collar sequence being capable of annealing to a second portion of the mRNA encoding at least a portion of an antibody; and

at least one restriction site located between the downstream primer sequence and upstream collar sequence incorporated into the plasmid.

- 35. (currently amended) A plasmid as in claim 23 comprising:

 a downstream primer sequence incorporated into the plasmid, the downstream primer

 being capable of annealing to a first portion of mRNA encoding at least a portion of an antibody;

 an upstream collar sequence comprising wherein the upstream collar sequence comprises

 SEQ. ID. NO: 3 incorporated into the plasmid, the upstream collar sequence being capable of

 annealing to a second portion of the mRNA encoding at least a portion of an antibody; and

 at least one restriction site located between the downstream primer sequence and

 upstream collar sequence incorporated into the plasmid.
- 36. (currently amended) A plasmid as in claim 23 comprising:

 a downstream primer sequence incorporated into the plasmid, the downstream primer

 being capable of annealing to a first portion of mRNA encoding at least a portion of an antibody;

 an upstream collar sequence comprising wherein the upstream collar sequence comprises

 SEQ. ID. NO: 7 incorporated into the plasmid, the upstream collar sequence being capable of

 annealing to a second portion of the mRNA encoding at least a portion of an antibody; and

 at least one restriction site located between the downstream primer sequence and

 upstream collar sequence incorporated into the plasmid.

37. (original) A host cell transformed with a plasmid of claim 23.

Claims 38-72 (cancelled).

- 73. (original) A plasmid as in claim 1 wherein two restriction sites that are the same or different are located between the downstream primer and upstream collar sequences.
- 74. (original) A plasmid as in claim 23 wherein two restriction sites that are the same or different are located between the downstream primer and upstream collar sequences.

Claims 75-84 (cancelled).
